

Module 3: Building Your First Game (Grades 6–8)

Objectives

Use loops and conditionals.

Build an interactive game.

Understand user input.

Game Instructions

Computer selects a random number.

Player guesses until correct.

Program provides hints.

Code Template

```
import random

secret = random.randint(1, 20)
guess = 0

while guess != secret:
    guess = int(input("Enter guess: "))

    if guess < secret:
        print("Too low!")
    elif guess > secret:
        print("Too high!")

print("You win!")
```

Extensions

Add score system.

Limit guesses.

Add difficulty levels.
