

Grin & GO!

Group Info:

We are a group of middle school students from Riverview Elementary/Middle School

Names:

Cage Church
Josie McCoy
Nick Harris

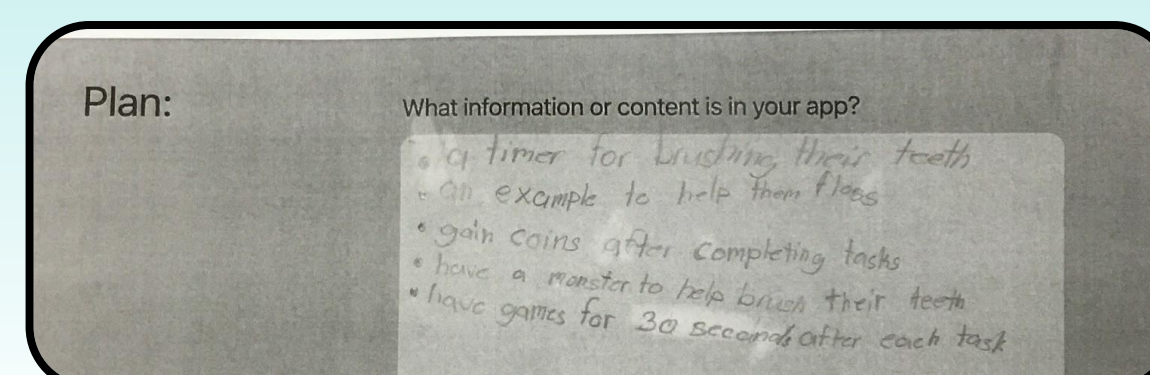

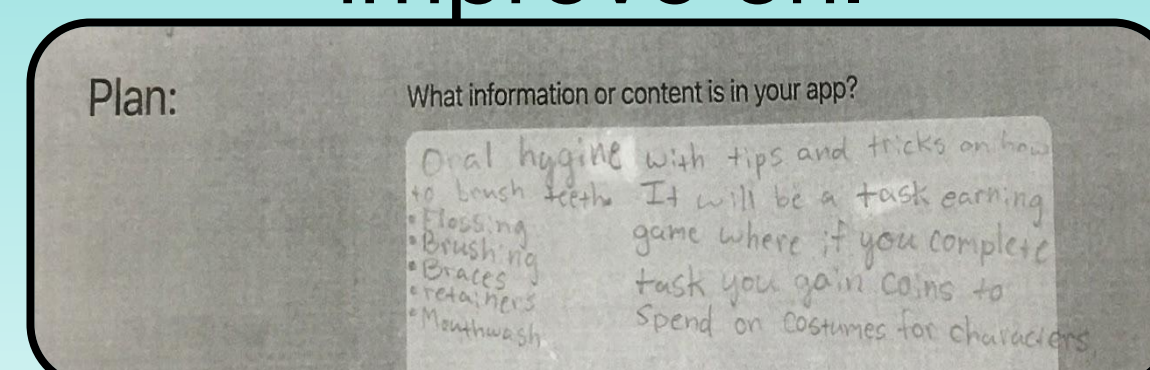

App Rationale:

- Our app will give the user a better understanding on how to brush, to floss, and to use mouthwash. Overall they will have better dental hygiene.

Design Process:

We went through a bunch of different, yet similar concepts for the design. We made sure that we added commands, functions, v-stack, and h-stack to our app. We contacted Crest and Colgate and asked them a few questions on what we could improve and fix about our app.

We also talked to a Registered Dental Hygienist Instructor. She gave us many ideas and she gave us some things that we could improve on.

Target Audience:

- Our app will help children of all ages who have trouble understanding how to clean and properly take care of their teeth. We believe that this app will improve children's oral hygiene.

- Our app will give the user videos to help guide them clean their teeth and games to help improve on cleaning their teeth.

- We have learned to use loops, functions, v-stack, h-stack, & commands

Next Steps:

We need to improve on coding. We could also improve on our game design and the variety on our games.
